

Project QCTV2018-1 Clarifications

General Terms:

- Presentation System is based around the Crestron DM Switcher. Presentation Feed refers to the output of the Crestron.
- Audio System is the BiAmp Tesira Server.
- "Podium" refers to the public comments podium. "Presentation" refers to the area that city staff make presentations from. (In Andover, this is the same location, but the other cities have separate public and staff areas.)
- Broadcast System is the video production switcher for live cable TV broadcast; currently a Rushworks V-8 VDesk. Broadcast Feed refers to the output of the VDesk switcher and does not mean a cable TV feed.

General Considerations:

- Where possible the equipment specified is the same make and model across the four city sites. Any substitution requests should take this into consideration.
- Device programming (Crestron, BiAmp, etc.) should use similar layouts and functions to improve ease of use between sites. (for example, the 'System Off' button should be in the same place across the four systems.) Bidder should submit proof graphics before programming.
- Cable service loops are specified for installed equipment. This included power cables.

Anoka Specific Items:

- (Option 3) Two wall-mounted monitors with full-motion mounts. Current specification is ceiling mount, city would prefer wall mount. This is a Bid Option item.
- (Option 4) An overflow (work session) monitor with Crestron switched feed, mounted above the glass wall on the conference room side with tilt feature. A 49" commercial display with wall mount is currently specified and preferred by city. Optional pricing on ceiling mount bracket with tilt. This is a Bid Option item.
- (Option 5) Add a third 55" monitor in front of dais with presentation feed (for guests sitting in front rows). This does not need to display the Broadcast Feed. This is a Bid Option item.
- (Option 6) Podium TV location to remain but upgraded to modern display that shows the Broadcast Feed from switcher (so the Mayor and councilmembers can see themselves). This does not need to display the Presentation System video. This is a Bid Option item.
- Presentation Feed for "smart TV" in work session room. This could be an HDMI jack on a wall plate. This is a Bid Option item.
